Description

The ContaminationSensor Module CSM 2000 is an online condition monitoring system for recording solid particle contamination in hydraulic and lubrication fluids containing a high proportion of air bubbles.

Air bubble suppression is used to dissolve the air bubbles so that they are not detected as particles.

In addition, it is the ideal solution for analyzing the particle content of fluids, independently of the rest of the hydraulic system.

As an option, other condition monitoring sensors such as the Hydac AquaSensor can be incorporated.

Applications

- Lubrication oil system in paper, steel and energy sectors
- For preventive, pro-active maintenance
- Monitoring of component cleanliness on test rigs
- Monitoring of oil cleanliness in reservoirs

Advantages

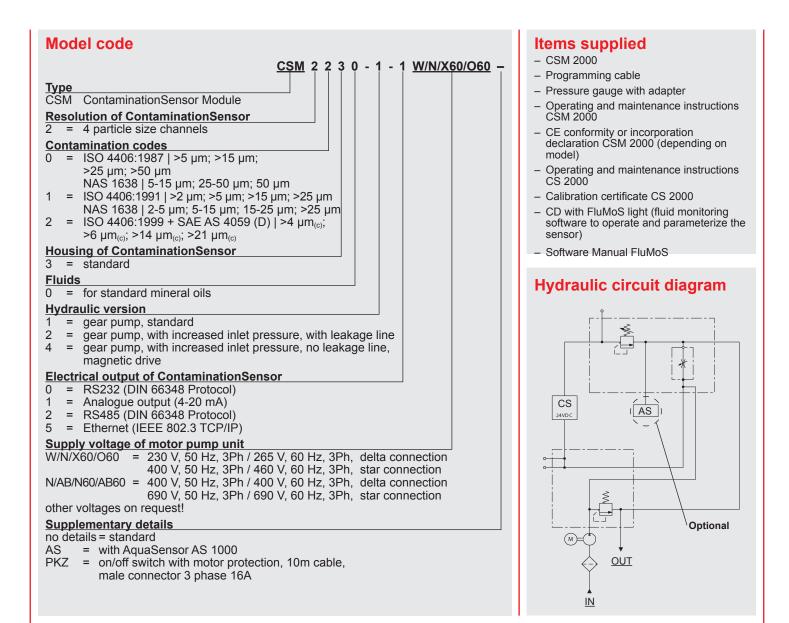

- Cost-effective, system solution
- Numerous data interfaces provide, amongst other things, communication via WLAN, intranet or internet
- Online monitoring of the oil cleanliness with alarm function to indicate:
- ingress of, and increase in, contamination
- increase in contamination as components start to wear
- when there are filtration problems
- Verification of cleanliness on test rigs
- Verification of changes in the oil cleanliness as a result of inadequate servicing.
