
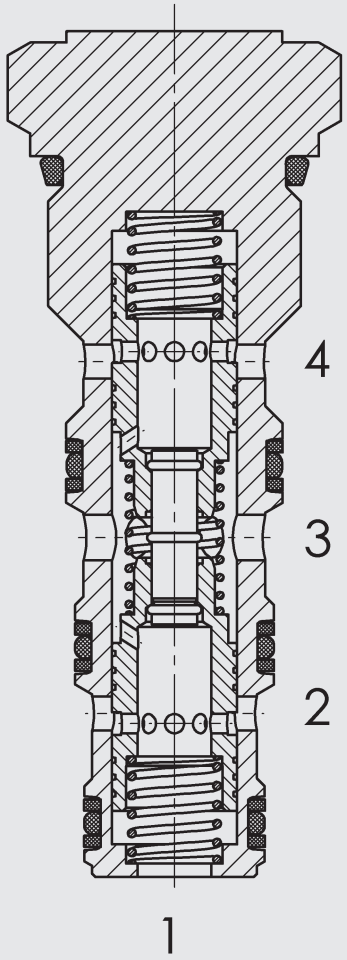
Flow Divider / Combiner UNF Cartridge – 350 bar

ST10-01

FUNCTION



Note:
Port 1 is not used

The flow divider is a spring-loaded pressure compensated spool type valve. It divides a flow in two and keeps both flows constant. The division is made according to the specified ratio - from port 3 to ports 2 and 4.
As a flow combiner it combines two partial flows together – from ports 2 and 4 to port 3.
Port 1 is not used.

FEATURES

- Can be used for differential locks in drive applications
- Excellent dividing and combining accuracy
- Synchronizing flow in both operating modes
- Wide flow range down to 25% of nominal flow rating
- Compact design
- Exposed surfaces zinc-nickel plated for increased corrosion protection (1.000 h Salt spray test)
